```
How many different products are there overall?

select *
from `e1.products`
limit 5

select count(*)
from `e1.products`

select count(ProductID)
from `e1.products`

How many products are there in each category?

select
  CategoryID,
  count(*) as total_count
from `e1.products`
group by CategoryID

How many units of each product have been sold?

select *
from `e1.order_items`
limit 5

select
  ProductID,
  sum(Quantity) as total_qty
from `e1.order_items`
group by ProductID

select *
from `e1.order_items`
```

```
What is the total sales value generated by each product?

select
  ProductID,
  sum(total) as total_sales
from `e1.order_items`
group by ProductID

What was the average selling price at which each product was sold?

select
  ProductID,
  avg(SellingPrice) as avg_selling_price
from `e1.order_items`
group by ProductID

What was the lowest and highest selling price recorded for each product?

select *
from `e1.order_items`
limit 5

select
  ProductID,
  min(SellingPrice) as lowest_sp,
  max(SellingPrice) as highest_sp
from `e1.order_items`
group by ProductID

for each of the order status, what is the number of orders for each of the customer?

select *
from `e1.orders`
limit 5
```

```sql
select
  CustomerID,
  status,
  count(*) as total_count
from `e1.orders`
group by CustomerID, Status

select
  CustomerID,
  status,
  count(*) as total_count
from `e1.orders`
group by Status, CustomerID

How many inventory records are maintained for each warehouse?
select *
from `e1.inventory`
limit 5

select
  WarehouseID,
  count(*) as no_of_records
from `e1.inventory`
group by WarehouseID

How many Orders are handled by each of the employees for each Status?

select
  EmployeeID,
  Status,
  count(*) as total_orders
from `e1.orders`
group by EmployeeID, Status
```

```
How many products in each category have an MRP above ₹20,000?

select *
from `e1.products`

select
  CategoryID,
  count(*) as total_products
from `e1.products`
where MRP > 2000
group by CategoryID

What is the total quantity sold for each product when quantity is greater than 1?

select *
from `e1.order_items`
limit 5

select
  ProductID,
  sum(Quantity) as total_qty
from `e1.order_items`
where Quantity > 1
group by ProductID

What is the average payment for each payment method among successful payments?

select
  Method,
  round(avg(amount), 2) as avg_amt
from `e1.payments`
where status = "Success"
group by Method
```

DPP

Task: Display SupplierID and the number of products supplied by each supplier. Show suppliers with the highest number of products first.

Task: Calculate the total sales value for each ProductID using the Total column from order_items. Display the products from highest to lowest sales value and show only the top 10.

Task: For only payments where Status = 'Success', calculate the number of transactions and total payment amount for each Method. Display methods with the highest total payment amount first.

Task: Calculate the number of orders placed by every CustomerID. Display only customers who have placed more than 3 orders.

Task: Consider only products having an MRP greater than ₹20,000. For each CategoryID, count the number of such products. Display only categories having more than 2 qualifying products.

Task: For each WarehouseID, calculate:

Total stock
Average stock per inventory record
Maximum stock in an inventory record
Minimum stock in an inventory record

Sort warehouses by total stock from highest to lowest.

Task: For every Status in the orders table, calculate the number of orders. Display the most common order status first.

Task: Consider only order-item records where SellingPrice > 10000. For each ProductID, calculate:

Number of order-item records
Total quantity sold
Total sales value
Average selling price

Display only products whose total sales value is greater than ₹50,000, sorted by total sales value from highest to lowest.
